NOTICE

The name of this publication has been changed to BULLETIN OF PHILIPPINE STATISTICS, *beginning with the present number. This title has been adopted because it describes more aptly the present make-up and contents of the publication than the previous title. Formerly, the use of the name "The Philippine Statistical Review" was fully justified by the fact that editorial notes, digests, business reviews, etc. were published in addition to statistical tables that made up the larger portion of the publication. Lately, the literary portions have been entirely discontinued in order to devote all available spaces to the presentation of more statistics on the Philippines.*

This issue is a combination of two numbers—those for the first and second quarters of 1938. This was done in order to make up for lost time, caused by the late arrivals of statistical information on crops from the different municipalities of the Islands due to changes of officials as a result of the last general elections.

[2] The figures show the weight in kilograms of the ores and concentrat Annual Report, in connection with the collection of taxes on mining output.

[1] As reported by the Collector of Internal Revenue, Manila, in his 1937es of the metallic minerals extracted from the mines.

[a] No actual value is given by Bureau of Internal Revenue, because the tax on coal is not based on the value but on its weight in tons.

[b] Coal production figures given represent only a part of the total production which was 29,897 tons in 1936 and 26,178 tons in 1937.

[a] Quantity of gold production in terms of fine ounces is obtained by dividing the values of gold production by the value of an ounce of fine gold which is ₱41.34 from 1907 to 1932; and for 1934 and 1935 the values were divided by ₱70. The quantity of gold in fine ounce for 1933 was obtained by dividing the value of gold in 1933 by the average value of an ounce of fine gold for that year.
